Keyword (Needs to Target next Quarter)	Monthly Volume	Difficulty	Search Intent	Target Page Type	Priority (H/M/L)	Why
Plant based protein	14800	30	Commercial, Informational	Collection Page	H	It main Service related keyword and also a lost keyword
Vegan protein powder	6600	32	Commercial	Collection Page	L	It main Service related keyword and keyword was ranking on 14 position previously
Vegan protein	4400	29	Commercial	Collection Page	H	It main Service related keyword and keyword was ranking on 6 position previously
Best plant protein powder	1300	35	Commercial	Collection Page	L	It main Service related keyword and also a lost keyword
Protein powder chocolate flavour	1000	13	Informational, Transactional	Product Page	M	Transactional Keyword with Low Volume
Best vegan protein powder	590	30	Commercial	Collection Page	M	Commercial Keyword, previously we were ranking on 2 position
Plant based protein powder	12100	23	Commercial, Informational	Collection Page	H	Ranking Dropped from 2 Page to 3 Page
Best plant protein powder in india	1600	17	Commercial	Collection Page	M	Ranking Dropped from 4 Page to 5 Page
Best protein powder for old age	1000	35	Commercial	Collection Page	M	Ranking Dropped
Chocolate protein powder	3600	29	Commercial	Product Page	L	High Volume product based Keyword
Best protein for muscle gain	3600	46	Commercial, Informational	Product Page	L	Competitor is ranking for this Keyword and we are not
Protein powder sachet	1300	14	Commercial, Informational	Product Page	L	Competitor is ranking for this Keyword and we are not

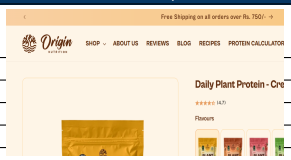

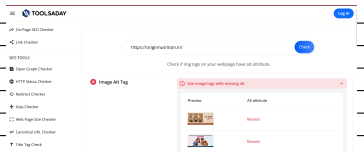

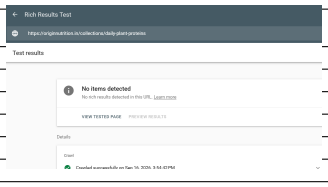

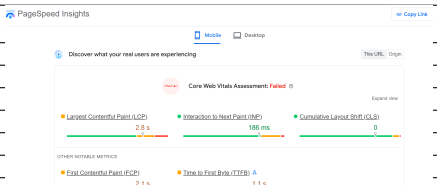

1. Which three keywords would you attack in the first 60 days, and why those three specifically?

I will target the three keywords mentioned below because they are currently ranking at some position, but their rankings have dropped. If I work on these keywords, their rankings can improve, and we can potentially regain their previous positions.

plant based protein powder, best plant protein powder in india, best protein powder for old age

2. Which keyword looks attractive on volume but you would deliberately skip? Why?

"*Best protein for muscle gain*" I would not completely skip this keyword, but I would focus on its long-tail variations because the keyword has a high Keyword Difficulty.

Technical Issue	Business Impact	Severity	Snapshot
Breadcrumb Missing	Missing breadcrumbs weaken site hierarchy, internal linking, and search engines' understanding of page relationships. They also prevent the use of BreadcrumbList structured data for clearer SERP navigation.	High	
Alt Tag	Missing or poorly optimized image alt tags can reduce image search visibility and make it harder for search engines to understand image context.	Low	
Structured Schema	Missing or incomplete structured data can limit search engines' understanding of page content and reduce eligibility for relevant rich results.	High	
Core Web Vitals	Poor Core Web Vitals can negatively affect page experience, user engagement, and search performance.	High	

I will prioritize resolving the breadcrumb and Core Web Vitals issues first, as these have a direct impact on site structure, user experience, and SEO performance.
